

Moot

Chris Allen

June 5, 2018

LambdaConf has a pretty good process

- ▶ Let's make it better!
- ▶ CFP through editing, review, and scheduling
- ▶ Tested process, serious formalization of a fair blinded process
- ▶ The organizers have to juggle of a lot of variables

The LambdaConf organizers are wonderful, hard-working people

- ▶ but they're still human
- ▶ I'd like to incrementally automate their workflow and make their lives easier

Not just about LambdaConf

- ▶ Lots of conferences have CFP and review processes they've invested in heavily
- ▶ It's very manual, with some conference organizers writing homebrew scripts and using a menagerie of applications and services that don't interoperate.
- ▶ Let's make this software available to others and help them automate what they're doing

Moot will be open source

- ▶ License not yet decided, but the software will be open source and publicly available
- ▶ Backend in Haskell

I need help, but I can offer help too

- ▶ Need help from backend devs, frontend devs, designer
- ▶ UX is important too!
- ▶ Finished Haskell Book recently, looking to dive into an application?
- ▶ I will tutor people that need help. Not just in the same capacity either!

Contact me if you're interested!
